

[illegible]The logo of Harran University is a circular emblem. It features a blue outer ring with the text "HARRAN ÜNİVERSİTESİ" in white capital letters at the top and "744" in white at the bottom. The center of the logo is a yellow circle containing a green stylized building or monument, surrounded by a decorative green border.

INTRODUCTION

THIS WEEK WE WILL WORK ON

Data Structures & Algorithms (DSA)

BLOG POST

TITLE: How to Study for Data-Structures and Algorithms Interviews at FAANG

<https://medium.com/swlh/how-to-study-for-data-structures-and-algorithms-interviews-at-faang-65043e00b5df>

INTRODUCTION

This is the story of how I got offers from Google, Amazon, Uber and more without a college degree.

THIS WAS ME
IN 2015

THE IMPORTANCE OF PREPARATION

- *I went from 0 → 100 in just a few months and I didn't do anything special aside from studying consistently. That's why I strongly believe any engineer can get good at these DS & Algo questions and get into F.A.A.N.G. or similar high paying roles.*

GOOGLE PERKS

THE REALITY OF TECH INTERVIEWS

- I discarded this notion of the mythical engineer who can on a whim pass a tech interview and started to appreciate the reality of the situation, that tech interviews are like the SAT's they give in school. It doesn't matter that you spent four years learning all of the content in high school, you still need to prep if you want to ace the test.

BUILDING A STUDY PLAN

- $\sum_{k=2}^{\infty} \frac{1}{k^2} = \frac{\pi^2}{6} - 1$
 $\sqrt{2424.96} = 49.24$
 352
 $(2) = 2 + 3 + 4.31447$
 $\sqrt{a^2 + b^2} = x^2 \ln x$
 $C(x, y) = \begin{cases} xy = 2 \\ cx - cy = 25 \\ 2\pi = C \end{cases}$
 $24 \frac{x}{y} + \frac{a^2 + b^2}{C} + \frac{1}{x^2} 9$
 $u = 984 + u^{20} (x^2 + 34)$
 $u = 14!$
 $\sum_{x=2}^{\infty} N^{30} \cdot x - \frac{1}{2} [984 + x^2]$
 $x = 4$
 $\beta = 9 + x^2 + y$

PRACTICE AND IMPLEMENTATION

- Practice implementing all of the data-structures mentioned earlier in this article until you don't need to look anything up and you will have a very easy time with these questions during the real interview. Focus on understanding why it's implemented the way it is rather than trying to remember the exact code.

KNOWING WHEN YOU'RE READY

- Keep track of your completion times when you do practice questions and aim for at most 40 minutes to complete most medium level questions and 1 hour to complete hard level questions on sites like leetcode.com or hackerrank.com.

WORDS OF THE WEEK

1. Recursion
2. Greedy Algorithms
3. Dynamic Programming
4. Bit Manipulation
5. Graph
6. Heap (Priority Queue)
7. Trie
8. Disjoint Set
9. Binary Search Tree
10. Breadth-First Search (BFS)

11. Depth-First Search (DFS)
12. Dijkstra's Algorithm
13. Bellman-Ford Algorithm
14. Merge Sort
15. Quick Sort
16. Sliding Window
17. Backtracking
18. Divide & Conquer
19. Big-O Notation
20. LRU Cache

PS: Keep a journal where you note these words with their meanings and usages in a sentence.
